Moinatik Ghori

Principal Infrastructure Engineer | AWS x 3 | Terraform x 1 |
Deerfield, Illinois, United States

Summary

I am a Principal Infrastructure Engineer with over 13+ years of hands-on experience in AWS and GCP cloud environments, DevOps practices, configuration management, and CI/CD. I have a proven track record of leading successful cloud migration and optimization projects, as well as designing and creating performance monitoring and metrics management dashboards.

In my current role, I leverage my expertise in Unix/Linux and Windows server administration, Kubernetes, scripting, and containerization to tackle diverse infrastructure challenges and bridge the gap between cloud and on-premises solutions. I also utilize various time-series databases, incident tracking tools, and real-time monitoring systems to ensure maximum operational efficiency and swift issue resolution. I am passionate about crafting effective N-Tier application strategies and collaborating with clients to deliver enterprise-scale DevOps and SRE solutions.

Experience

Capital One

Principal Infrastructure Engineer
May 2025 - Present (7 months)
Chicago, Illinois, United States

Discover Financial Services

Principal Infrastructure Engineer
March 2024 - May 2025 (1 year 3 months)
Illinois, United States

Identity and Access Management (IAM) Implementation:

Led the design and implementation of IAM policies across the organization, ensuring security and scalability.

Collaborated with cross-functional teams to maintain compliance and provide seamless access provisioning.

AWS Cloud Resource Tagging Standardization:

Spearheaded the Tagatron project, automating the Tag Enforcement and Reconciliation System to apply company-defined standard tags to AWS resources.

Designed and implemented a comprehensive AWS Tagging Framework for cloud resource management, improving cost transparency and governance.

Cost Optimization & Dashboard Insights:

Developed actionable dashboards leveraging tagging data to optimize spending and track resource utilization.

Enabled teams to identify high-cost resources and take proactive measures to reduce cloud spending.

Cloud Infrastructure Automation (IaC):

Managed AWS infrastructure as code using Terraform, automating EC2 instance provisioning and scaling.

Enhanced Terraform functionality with custom Python scripts to improve resource deployment and management.

Security and Compliance in Cloud:

Integrated IAM practices with security tools such as AWS Security Hub, AWS Config, and AWS CloudTrail to monitor and enforce security standards.

Architected SSO solutions using SAML, reducing user login times by 40% and enhancing user satisfaction by 30%.

Cross-Functional Collaboration:

Worked with diverse teams to align IAM policies with business goals, ensuring secure access management across cloud environments.

Actively collaborated with DevOps and Security teams to ensure seamless policy enforcement and incident tracking.

Commitment to Innovation and Excellence:

Constantly researched and adopted new technologies to improve IAM practices and cloud management.

Drove continuous improvement by fostering a culture of collaboration and innovation, ensuring operational excellence in IAM and cloud infrastructure.

Apple

Senior DevOps Engineer

February 2022 - March 2024 (2 years 2 months)

Austin, Texas, United States

On-Premises to Cloud Migration and Optimization:

Led the successful migration of monolithic and bare metal applications to AWS Cloud.

Optimized resource allocation to achieve maximum operational efficiency.

Performance Monitoring and Dashboards:

Designed and created new dashboards to track and display key performance indicators (KPIs).

Implemented real-time monitoring for comprehensive system performance snapshots.

Facilitated incident tracking and root cause analysis for swift issue resolution.

Metrics Management:

Utilized various time-series databases to consolidate metrics on a single dashboard.

Managed availability, latency, performance, efficiency, change management, monitoring, emergency response, and capacity planning.

Alerting and Tool Evaluation:

Actively sought and evaluated alerting and monitoring tools.

Conducted Proof of Concept assessments and presented tool pros and cons to the team.

Cross-Team Collaboration:

Collaborated with multiple teams to gather cross-data sources from various platforms.

Prepared comprehensive dashboards and established alerting systems for critical components.

Change Management and Documentation:

Maintained a structured change history by documenting all alterations as user stories in Pivotal Tracker and JIRA.

CI/CD Pipeline Automation:

Implemented CI/CD pipelines in both cloud and on-premises environments.

Utilized GIT, MS Build, Docker, Maven, and Jenkins plugins for automation.

Created YAML templates to streamline and automate the pipeline process.

Infrastructure as Code (IaaS) Management:

Managed AWS infrastructure as code using Terraform.
Developed Python scripts to enhance Terraform functionality.
Provisioned highly available EC2 instances and automated build and deployment using Jenkins and cloud formation.

Commitment to Excellence:

Ensured system reliability, scalability, and performance through continuous improvement initiatives.

Elevated operational capabilities by driving innovation and collaboration.

The Home Depot

Senior Site Reliability Engineer

December 2018 - February 2022 (3 years 3 months)

Greater Atlanta Area

As a Kubernetes expert, I led the successful migration of monolithic/bare metal applications to Kubernetes Cluster, where I optimized the resources to achieve maximum efficiency.

To provide a comprehensive snapshot of system performance, I created new Dashboards and visually tracked, analyzed, and displayed key performance indicators (KPIs). I also ensured smooth incident tracking by tracking down causes.

Using different time-series databases, I displayed metrics on one dashboard, taking charge of availability, latency, performance, efficiency, change management, monitoring, emergency response, and capacity planning.

I always sought better alerting and monitoring tools and presented the pros and cons to the team after completing Proof of Concept.

Collaborating with multiple teams, I gathered cross-data sources from multiple data sources to prepare Dashboards. Additionally, I created alerts for reliable systems and finalized appropriate thresholds to alert the team for any possible incident.

To maintain change history, I kept all changes as stories in Pivotal Tracker/JIRA.

Using CI/CD pipelines in both cloud and on-premises environments, I implemented GIT, MS Build, Docker, Maven, and Jenkins plugins. I also created YAML templates to automate the pipeline process.

I managed AWS infrastructure as code (IaaS) using Terraform, where I wrote new Python scripts to support new functionality in Terraform. Using Terraform and cloud formation, I provisioned highly available EC2 Instances and set up build and deployment automation for Terraform scripts using Jenkins.

Taipei Fubon Bank

Senior Cloud Engineer

April 2016 - November 2018 (2 years 8 months)

Taipei City, Taiwan

As an AWS expert, I provisioned and administered EC2 instances while configuring EBS, Simple Storage(S3), cross-region replication, Elastic Load Balancer, Autoscaling, CloudWatch alarms, and Virtual Private Cloud (VPC). I also mapped multi-AZ VPC instances and RDS based on architecture.

To handle large-scale and large volume usage, I built out and scaled Kafka clusters across business functions. I installed and configured Confluent Kafka in R&D line and validated the installation with HDFS connector and Hive connectors.

I created Python scripts to automate AWS services such as web servers, ELB, Cloud Front distribution, database, EC2 and database security groups, S3 bucket, and application configuration.

In AWS, I configured Amazon S3, Elastic Load Balancing, IAM, and Security Groups in Public and Private Subnets in VPC. I also created storage cached and storage volume gateways to store data and other services.

To automatically sign up instances in AWS EC2 and OpsWorks stacks and integrate with Auto Scaling with configured AMIs, I wrote Python scripts using the Boto3 library.

Using Jenkins and pipelines, I drove all microservices builds out to the Docker registry and deployed them to Kubernetes. I created Pods and managed them using Kubernetes.

My expertise includes Subversion (SVN), AWS, Jenkins, Java/J2EE, ANT, Tomcat, Perl Scripts, Shell Scripts, XML, UNIX, LINUX, OpenShift, Windows 7, Bamboo, XL Deploy, XL Release, Ruby, Oracle, JIRA, AWS, GCP, Red hat, Linux servers, Jenkins, GIT, Chef, Docker, microservices, Shell Scripting, SonarQube, Hadoop, Ansible, Tomcat, Nagios, Python, ELK, ANT, Maven, Kubernetes, and Splunk.

The National Commercial Bank - AlahliNCB

DevOps Engineer

December 2014 - February 2016 (1 year 3 months)

Jeddah Governorate, Saudi Arabia

As a DevOps engineer, my primary responsibility was to integrate various tools in the DevOps toolchain and SDLC process to increase development and infrastructure team velocity while maintaining high standards of quality and consistency. I stood up backend resources in the Cloud using infrastructure as code, creating, configuring, and maintaining Infrastructure on AWS Cloud services, including Virtual Private Cloud (VPC), EC2, RDS, S3, and IAM.

In Cloud Formation, I set up and built AWS infrastructure resources such as VPC, EC2, S3, IAM, EBS, Elastic Search, Security Group, Auto Scaling, Lambda, and RDS and deployed content to the Cloud platform on AWS using EC2, S3, and EBS.

I have hands-on experience with IAM to set up user roles with corresponding user and group policies using JSON. I defined AWS Security Groups as virtual firewalls that controlled the traffic allowed reaching one or more AWS EC2 instances.

I developed various dashboards, metrics, alarms, and notifications for servers using AWS Cloud Watch, Sumologic, and Newrelic. Additionally, I designed and implemented the integration of automated testing into deployment pipelines using Selenium, Load Runner, JMeter, or similar tools.

As a part of my role, I also led the migration of Bitbucket cloud-based SCM to Gitlab and was responsible for the design and maintenance of Gitlab repositories, views, and access control strategies. I generated user-level access for Gitlab project directories to facilitate smooth code changes.

Tata Consultancy Services

3 years 10 months

Build And Release Engineer

April 2012 - December 2014 (2 years 9 months)

Mumbai

Collaborated with client teams to gather requirements for deployment requests.

Facilitated communication and coordination between Development, Database Administration, QA, and IT Operations teams to ensure smooth deployment without resource conflicts.

Partnered with Project Managers to comprehend release scope and define success criteria for each release.

Designed, managed, and optimized global build infrastructure for software development engineering teams, including building scripts, continuous integration infrastructure, and deployment tools.

Led the migration of code from Subversion to Git, and established continuous integration using Jenkins. Created repositories with proper branch, tag, and trunk structures.

Participated in sprint planning and daily stand-up meetings.

Performed patching and updates as per the release process.

Documented and managed all post-deployment issues using the Post-Deployment Issue Log.

Communicated deployment schedules, quality assurance, validation, and defect tracking/resolution to all relevant parties.

Conducted daily post-deployment stand-up meetings to review and resolve all tracked issues, assigning owners to each issue.

Created and maintained logs of all post-deployment issues, ensuring timely updates.

Automated the process of creating branches, tags, and merging code.

Ensured completion of all steps in a timely manner and documented their completion times and issue logs.

Assistant System Engineer Trainee

March 2011 - March 2012 (1 year 1 month)

Mumbai Area, India

Project Title: Finance Module – Core Banking Solution (CBS)

Client: All Govt. Nationalized Banks, India

Description:

As a team member of the Remittance and General Banking team, I worked on the Core Banking Solution for various banks including Bank of Maharashtra, Central Bank of India, and Allahabad Bank. My primary responsibility was in the remittance module, where I addressed all issues related to remittance. Throughout the project, we developed and implemented functionalities as per the specific requirements of each bank.

Environment: COBOL, SQL Database, .Net as Front End

Role: Team Member - Remittance and General Banking

Contribution:

- Prepared component specifications based on the requirements provided
- Enhanced the code as required
- Conducted unit testing using actual data
- Communicated any major issues or impacts to onsite and offshore leads
- Assisted in preparing delivery documents for the components.

Parul University

University Lecturer

July 2010 - February 2011 (8 months)

Vadodara

As an entry-level college professor, I am committed to working diligently with my students to provide them with the best learning experience possible. I am skilled in preparing flexible lesson plans that cater to the individual needs and abilities of each class. Additionally, I specialize in forming productive relationships with both students and fellow faculty members.

Responsibilities:

- To teach undergraduate courses assigned by the Head of Department and reviewed periodically by the same authority.

- To engage with scholarly and professional communities.
- To supervise or assist in the supervision of undergraduate students.
- To contribute to the development, planning, and implementation of a high-quality curriculum.
- To help develop learning materials, prepare schemes of work, and maintain records to monitor student progress, achievement, and attendance.
- To participate in departmental and faculty seminars that aim to share knowledge and build interdisciplinary collaboration within and outside the department.
- To participate in the development, administration, and marking of exams and other assessments.
- To provide pastoral care and support to students.
- To participate in the administration of the department's programmed study and other activities as requested.
- To contribute to departmental and faculty-wide working groups or committees as requested.

Education

Parul Institute of Engineering and Technology

Bachelor of Engineering (BE), Information Technology · (2006 - 2010)

Vidhyut Board Vidhayalaya

HSC, Science · (2004 - 2006)
